Dear  Minh Quang PHAM,

As TACL action editor for submission 2327, "Revisiting Multi-Domain Machine
Translation", I am happy to tell you that I am accepting your paper
essentially "as is"  for publication at TACL, subject to another round of
technical review of your final version by me.

REQUIRED REVISIONS, IF ANY:

You have done a good job addressing the comments from the original
reviewers, and the paper looks to be in very good shape. I particularly
appreciated the careful color-coding of additions, which made it easy to
verify that the reviewers' points were addressed — thanks!

I have only a few minor suggestions and questions:
— Table 5 is quite difficult to take in (a point also made by one of the
reviewers). Consider some kind of graphical presentation of this
information. This is optional, but strongly suggested.
— There are still a few typos and other minor problems, eg table 6 is
missing a bottom border, and "by randomly each corpus" on p12.
— In what way do you intend to specify the exact train/dev/test split of the
data?

Your final version is due in six (6) weeks, Monday November 02, 2020 (the
exact hour doesn't matter), although eligibility for presentations at
specific conferences may require meeting earlier deadlines listed at the
TACL announcement page, https://transacl.org/ojs/index.php/tacl/announcement
. Please note that failure to meet this deadline may result in the
revocation of conference-presentation rights, or even acceptance status.

The complete instructions for final-version preparation, and a description
and timeline of what happens after you submit your final version (both
technical review by TACL and copyediting, proofreading, and so on by MIT
Press),  are here:
https://www.transacl.org/ojs/index.php/tacl/author/instructions/proof

Note that A-decision papers (accepted "as is") can be put on arXiv; you
do not need to wait for the MIT publication process to complete. Be sure to
indicate that the arXiv version is a pre-MIT Press publication version.
Congratulations on your excellent work and thank you for submitting to TACL!
